## WOOD'S SEEDS ARE TESTED

And we know that they will grow before they are sent out. Even then they occasionally do not come up, due to causes over which we have no control, such as covering too deeply or not deeply enough; too little or too much moisture, cold weather, insects, or a crust through which the sprouts cannot penetrate, etc.; therefore, T. W. Wood & Sons give no warranty, express or implied, as to the description (name and kind), productiveness or any other matter of any seeds, bulbs or plants we sell, and will not be in any way responsible for the crop. Our liability in all instances is limited to the purchase price of the seed.

## About Argentine Alfalfa

The Argentine-grown Alfalfa seed we are offering is all grown in the cool climate of Argentine, and throughout the eastern part of our country it has been found hardy, and will not winter-kill. It is equal to Kansas-grown and Oklahoma-grown Alfalfa in its resistance to winter-killing.

The Argentine-grown Alfalfa seed we sold last year turned out very well indeed, some people having already cut as many as three crops of it from a field.

Our suggestion, because of the very late delivery of new crop Oklahoma-grown and Kansas-grown Alfalfa, is that farmers will be wise to sow this year the Argentine-grown.
